

Markdown: a quick tutorial

Adapted from <https://guides.github.com/features/mastering-markdown/>

Presented by Gaurav Trivedi (@trivedigaurav)

What is Markdown

- A simple way to format text
- Plain text with some extra symbols: `*`, `_`, `#` etc.
- Supports formatting text- **bold** or *italic*, adding images ,
 - and creating lists etc.
- Plus emojis , *math*, `code`
- Websites like [GitHub](#), [Reddit](#) use it

Some other ways to format text: *WikiSyntax*, *HTML*, *Word*...

Basic Text

Easy to make words **bold** and *italic* with Markdown.
Also add links: [GitHub.com](http://github.com)

Simple formatting **bold** and *italic* with Markdown.

Adding links: [GitHub.com](http://github.com)

Lists

1. Number one

2. Two

* Start with a star

- Or, dashes

- Like this

1. Number one

2. Two

- Start with a star

- Or, dashes

- Like this

Images

```
![Markdown Logo](markdown.png)
```

Headers and quotes

```
# Start lines with a `#` to create headings.  
### Multiple `##` in a row denote smaller heading sizes.  
all the way up to six `#####`.  
  
> To quote someone, use the > character - Says me!
```

Start lines with a **#** to create headings.

Multiple **##** in a row denote smaller heading sizes.

all the way up to six **#####** .

To quote someone, use the > character ~Says me!

Code

Write code inline, `markdown = true`:

```
Write code inline, ``markdown=true``
```

Or, write code in-between backticks (``````):

```
function fancyAlert(arg) {  
  if(arg) {  
    $.alert({div: '#foo'})  
  }  
  return true;  
}
```

Tables

```
First Header | Second Header
-----|-----
Cell 1 | Cell 2
First column | Second column
```

First Header	Second Header
Cell 1	Cell 2
First column	Second column

Math

Use `$` for inline maths, such as $ax^2 + bc + c$, and `$$` for block maths:

$$I_{xx} = \int \int_R y^2 f(x, y) \cdot dydx$$

This is inline: `ax^2+bx+c`, and this is block:

`$$I_{xx}=\int\int_Ry^2f(x,y)\cdot{}dydx$$`

These slides were written in Markdown 👍
